Abcourt Mines Inc. (ABI-V)

Abcourt intersects 1.2 g/t Au over 23.5 meters directly below Cartwright Stripping on its Flordin Property in the Lebel-sur-Quévillon Area.

Abcourt reported on February 11, 2025 additional assay results from its most recent drilling campaign at its 100% owned Flordin property in the Lebel-sur-Quévillon area in the Québec Abitibi. Recall on January 30, 2025, Abcourt had announced first assay results from the Cartwright sector. We understand that >1,000 m of drilling (8 holes) have been completed in the immediate vicinity of the Cartwright stripping area carried out in the fall of 2024 (see: https://www.linkedin.com/posts/eric-lemieux-9468715_quebec-abitibi-flordin-activity-7255583468271595524-uAIS?utm_source=share&utm_medium=member_desktop).

Assay results from the drilling carried out under the Cartwright stripping:

The results from 4 new drill hole results are disclosed. Drill hole FL-25-278 returned 1.2 g/t Au over 23.5 m, including 4.5 g/t Au over 3.5 m. We estimate the average grade x thickness metric of the newly disclosed drill holes at 7.38 g/t Au x m.

A total of 6 drill holes of length varying from 100-150 m have been implanted on the edge and nearly 50 m beneath the stripped zone. Overall, we estimate the average grade x thickness metric of the 6 disclosed drill holes at 17.75 g/t Au x m.

The mineralized zones (Adam and Horse), intersected by all drill holes, are located very close to surface, less than 50 m vertically. The high-grade gold mineralization characteristic of the Horse mineralized zone is continuous over 200 m lateral strike and remains largely open at depth and laterally.

Pascal Hamelin, President et CEO commented: *"The latest drilling results from the Cartwright stripping demonstrate the continuity of the Horse and Adam mineralized zones within a broad corridor of disseminated pyrites in basalt over 200 metres along strike. To date, we have completed only 804 metres of drilling directly under the trench. Planning is currently underway to add additional holes in this area that remains virtually unexplored to the east. Indeed, hole 277 is the only one that has been completed in this area. With a gold price approaching \$3,000 per US ounce, the Flordin project, with convincing results so close to surface, remains a priority for Abcourt. Finally, we would like to welcome Agnico-Eagle to our Flordin-Cartwright sector. Last December, Agnico-Eagle announced the acquisition of O3 Mining, which holds mining titles and carries out exploration work in this area".*
