Abcourt Mines Inc. (ABI-V)

Abcourt intersects a new gold mineralized zone grading 1.3 g/t Au over 28.5 metres, 1.8 km west to the January 2025 drilling on the Flordin Property in the Lebel-sur-Quévillon area

On February 20, 2025, Abcourt announced assay results of its first hole drilled in the eastern extension of the South Zone on its 100% owned Flordin Property in the Lebel-sur-Quévillon area of the Québec Abitibi. This gold-bearing zone, in the western Flordin sector, was discovered in the mid-1980s by Cambior. Hole FL-25-280 intersected the South Zone at 483 metres depth as well as a new gold mineralized zone grading 1.3 g/t Au over 28.5 m (including 5.1 g/t Au over 3 m (540.5 to 569 m) directly after the South Zone at over 400 metres depth. Recall, Abcourt had reported on February 11, 2025 additional assay results from the Cartwright sector in the immediate vicinity of the Cartwright stripping area carried out in the fall of 2024 (see: https://www.linkedin.com/posts/eric-lemieux-9468715_quebec-abitibi-flordin-activity-7295244122821431297-_LG8?utm_source=share&utm_medium=member_desktop).

Saliently, the new gold mineralized zone has never been drilled before and remains open laterally and at depth. The 2025 drilling currently underway is the deepest ever drilled to date in this area of the property (section 359235). The South Zone was recognized in drill hole 280 and historical descriptions are consistent with the mineralization observed in Abcourt's drill core. Indeed, this type of mineralization is characterized by pyrite bands associated with pink hematized silica bands with sericite and magnetite bands. This type of mineralization has already been recognized in Abcourt's previous drilling. Of note, Hole FL-23-265, had intersected up to 3.9 g/t Au over 19 m (including 14.7 g/t Au over 4 m) in the central part of the property, between the South Zone and Cartwright sector. The mineralization in this hole is similar to that intercepted in Hole FL-25-280 (South Zone) and Hole FL-25-274 (Cartwright sector). Mineralization of similar tenor is now recognized and traced over a distance >1.8 km.

Pascal Hamelin, President et CEO commented: "*The drilling campaign underway on our Flordin Property has moved to the western part of the property, approximately 1.8 km from the last announced holes in the Cartwright area. With a single hole drilled in the South Zone area, we can trace and recognize the high-grade gold mineralization characteristics of the area. Our 2023 and 2025 holes demonstrate that we can link this high-grade gold mineralization over more than 1.8 km of distance on our property*".
