Abcourt Mines Inc. (ABI-V)

Abcourt intersects up to 3.5 g/t Au over 27.5 m directly underneath Cartwright stripping at the Flordin Property in the Lebel-sur-Quévillon Area, Abitibi

On January 30, 2025, Abcourt reported first assay results from its recent drilling campaign currently underway on its 100% owned Flordin property in the Lebel-sur-Quévillon area. Recall on January 9, 2025, Abcourt had announced that it was commencing a first phase of drilling, of a minimum of 3,000 m, on the Cartwright sector and the Flordin sector.

To date, >1,000 m of drilling (8 holes) have been completed in the immediate vicinity of the Cartwright stripping area carried out in the fall of 2024 (see: https://www.linkedin.com/posts/eric-lemieux-9468715_quebec-abitibi-flordin-activity-7255583468271595524-uAIS?utm_source=share&utm_medium=member_desktop). The results obtained have been validated for the first two holes of the 2025 campaign as they intersected the mineralized zones recognized in the October 2024 stripping, namely the Adam and Horse zones.

Drill hole FL-25-273 returned 1.2 g/t Au over 18.5 m (including 6.6 g/t Au over 2 m).

Drill hole FL-25-274 returned 3.5 g/t Au over 27.5 m (including 12.1 g/t Au over 7.5 m).

The intersected mineralized zones in drilling correlate with those observed on the Cartwright stripping and are located very close to surface, <50 m vertically. Between the zones, there is presence of lower-grade gold directly related to disseminated pyrite. The Adam mineralized zone connects with the Horse mineralized zone as attested by the first 2 drill holes of the 2025 campaign. The high-grade gold mineralization is directly associated with the amount of pyrite observed in the core. The mineralization described in the drilling is similar to that observed in the channels taken on the Cartwright stripping in the fall of 2024. A characteristic silica-hematite alteration is also observed.

The results of next drill holes shall be disclosed as the assay results become available.

Pascal Hamelin, President et CEO stated: *"The drilling campaign currently underway on our Flordin property demonstrates the strong potential of the Cartwright sector directly on surface and 35 km north of the municipality of Lebel-sur-Quévillon. The next drill holes to come (approximately 2,000 metres) in this phase will allow us to extend the typical Cartwright mineralization well beyond the trench completed in 2024. This drilling campaign of more than 3,000 metres is part of the company's development strategy by promoting our advanced exploration projects in the perspective of the constant rise in the price of gold".*
