Brunswick Exploration Inc. (BRW-V)

Brunswick continues to extend the mineralized footprint of Mirage with up to 36 Meters at 1.51% Li2O.

On April 24, 2025, Brunswick announced the first results from the 2025 Mirage winter drilling campaign. Brunswick has drilled an additional 24 holes targeting extensions of known mineralized zones at the Mirage Project located in the Eeyou Istchee-James Bay region of Québec, ~40 km south of the Trans-Taiga Road. The Mirage Project is composed of ~427 claims located ~34km NE of Winsome Resources Adina Project which could eventually be tied to the Renard Project at the head of Route 167 Ext. The disclosed results are from the Central Zone including the MR-6, MR-3 dykes and Stacked Dyke area where Brunswick continues to intersect wide and well mineralized intervals along strike and at depth. Recall on January 9, 2025, Brunswick had announced the final results from the Mirage summer 2024 5,000m, drilling campaign that had focused on the Central Zone, including the MR-6 and MR-3 dykes (see: https://www.linkedin.com/posts/eric-lemieux-9468715_quebec-jamesbay-lithium-activity-7283586722121101312-9CsH?utm_source=share&utm_medium=member_desktop).

Mirage Project Winter 2025 Drilling Overview: A total of 24 drill holes prioritizing near surfaces mineralization in the extension of the Staked Dyke area were completed during the winter program.

MR-6 Dyke extending to the NW: MR-25-101 confirmed the plunge to the north of MR-6 with an intercept of 28 m at 1.32% Li2O (from 173 m to 201 m) and extended the MR-6 pegmatite by 100 m. The vertical holes MR-25-99 and MR-25-100 also intercepted the MR-6 dyke over 14.3 m and 19.4 m respectively but no spodumene was identified though signs of heavy alteration were observed.

Significant intervals within the Stacked Dyke area: The 2025 winter drilling campaign focused in part on extending the mineralized Stacked Dyke area to the East. The hole MR-25-102 extended the Staked Dyke area to the SE with 14 mineralized dykes intercepted with the largest grading 1.51% Li2O over 35.65 m (from 166.6 m to 202.25 m). MR-23-32ext was drilled to connect the Stacked Dyke area to MR-6 and multiple dykes were intercepted and confirmed the presence of 3 new sub horizontal dykes under MR-6 with the largest returning 1.02% Li2O over 7.75 m (from 158.25 m to 166 m).

Potentially expanding on MR-3: The holes MR-25-96 and MR-25-98 extended the MR-3 dyke 150m to the South with 0.79% Li2O over 12.2 m (from 55.8 m to 68 m) and 1.26% Li2O over 7 m (from 176 m to 183 m). The hole MR-25-95 also confirmed the presence of MR-3 and intersected a new dyke from 123.9 to 132 that returned 0.76% Li2O over 8.31 m. This new shallow dipping mineralized pegmatite is located between MR-3 and MR-6 and is open in all directions. From 290 to 307 m along hole depth, the hole MR-25-95 holes intersected 3 mineralized dykes that could be extensions to MR-6 at depth, dipping to the east.

The MR-3, MR-6 and Staked Dyke system can now be traced together into a major swarm of spodumene bearing pegmatites covering a surface area of over 1,000 m by up to ~450 m. We estimate the disclosed holes (29 intercepts) have a grade x thickness metric at 7.5% Li2O per m. Overall, for the Central Zone, we estimate a grade x thickness metric of 14.36% Li2O per m. Assays are pending for a further 16 holes.

Mr. Killian Charles, President and CEO of stated: “*To date, every drill campaign has demonstrated the significant exploration upside at Mirage and these first results from our winter 2025 campaign are no different. We have successfully extended the MR-6 pegmatite and continue to rapidly add considerable intercepts in the neighboring Stacked Dyke area. Interestingly, this high potential target area has continued to return* *multiple significant mineralized intercepts over the entirety of each drill hole and the Stacked Dyke area remains open in multiple directions. Brunswick Exploration remains one of the most active lithium exploration companies globally and looks forward to releasing more drill results from Mirage and the restart of prospecting in Greenland. With its unique portfolio, the Company expects to have a milestone rich year*“.
