Brunswick Exploration Inc. (BRW-V)

Brunswick expands lithium portfolio in James Bay, Nunavik, Labrador and Greenland.

On March 26, 2024, Brunswick reported that it has staked multiple claim groups for highly prospective regional lithium plays in Eastern Canada and Greenland. Brunswick has expanded its exceptional grassroot portfolio across Québec, Canada and Greenland pursuant to its focused and innovative grassroot exploration campaign. This campaign has led up to 3 new discoveries, including the flagship Mirage Project (see: https://www.linkedin.com/pulse/brunswick-exploration-inc-brw-v-intersects-spodumene-dyke-lemieux-9demf/?trackingId=xFjkYrEsRxCPSBskxqVCYA%3D%3D) and the Elrond Project (see: https://www.linkedin.com/pulse/midland-exploration-inc-md-v-brunswick-brw-v-launch-maiden-lemieux-xq14e/?trackingId=xFjkYrEsRxCPSBskxqVCYA%3D%3D).

Astute portfolio expansion: Brunswick has expanded its portfolio of targets and map-staked over 215 outcropping, mapped and/or interpreted, untested S-type pegmatites, measuring between 500 and 8,800 m in strike length. All these new targets are located in areas that have seen minimal or no current lithium exploration in Québec, Labrador and, for the first time, Greenland and, for most, located near existing roads, power infrastructure and/or tidal water. The newly acquired pegmatites were identified following extensive compilation work by the Brunswick exploration team.

SW Greenland – Pushing the envelope for lithium exploration: Having strong ties to Europe via Denmark and recently the focus of European Union delegation which highlighted the critical mineral potential of the autonomous country within the Kingdon of Denmark, Greenland has outstanding outcrop exposure, allowing for efficient and effective helicopter-supported prospecting (see for example: https://www.linkedin.com/pulse/aex-gold-inc-aex-v-2020-exploration-results-from-south-eric-lemieux/?trackingId=QY3GfU7iSjWiWw3jkxShmA%3D%3D; https://www.linkedin.com/pulse/aex-gold-inc-aex-v-again-increasing-land-position-south-eric-lemieux/?trackingId=hXgjKhNPRqmrApLd8MksbA%3D%3D and https://www.linkedin.com/pulse/aex-gold-inc-aex-v-increasing-land-position-south-eric-lemieux/?trackingId=kzndAwxDSIW1GITUxxG4Bg%3D%3D). Pegmatites were staked based on preferred geologic environments, historical geochemistry, satellite imagery and historical mapping. Notably, there has been little exploration for lithium in Greenland while having significant potential for new discoveries and containing all key geological grassroot indicators utilized by the Brunswick exploration team. The license areas, applied for by a third party (Xploration Services Greenland A/S - https://www.xplorationservices.com/), are near communities and tidal water and there is a deep-sea port in Nuuk.

Nuuk Project: The project contains one proposed mineral exploration license, containing 5 blocks, with a total surface area of 49,562 ha, located between 10 and 90 km from the capital of Greenland, Nuuk. The project area contains 92 mapped and interpreted pegmatites that are

Eric Lemieux, MSc, P. Geo
Mining & Exploration Analytics
eblconsultants@gmail.com
819 314 8081

between 500 and 8,800 m in strike length. The area contains beryl and tourmaline occurrences as well as a historic pegmatite grab sample containing up to 3,700 ppm Rb and a K/Rb ratio of 9.5 already indicating the potential for very evolved pegmatites.

Paamiut Project: The project contains one proposed mineral exploration license, containing 5 blocks, with a total surface area of 15,141 ha, located between 20 and 70 km from the community of Paamiut. The properties contain 41 mapped and interpreted pegmatites that are between 500 and 4,400 m in strike length.

Eastern Canada – Expertise leads to new frontiers in lithium:

Eeyou Istchee James Bay, Québec: The new project area of interest comprises 538 claim units with a total surface area of 26,642 ha, located roughly NW of the Caniapiscau Reservoir and NE of the Mirage Project. The new claims contain multiple mafic belts that have a rough strike length of 12-20 km (Coulon greenstone belt) with multiple documented pegmatites (see pages 157-163: https://www.vmbl.ca/Actions/1/Report_January%2018%202012_F.pdf). Up to 7 historic pegmatite outcrops are mapped on the property with biotite and/or muscovite. This area has seen little to no exploration for lithium.

Nunavik, Québec: The project comprises 511 claim units with a total surface area of 23,519 ha and most claims are located roughly 20-90 km from the community of Kuujjuaq and are close to tide water. Compilation work has identified a minimum of 64 mapped pegmatites that are roughly 500 to 2,900 m in strike length. Pegmatites were staked based on preferred geologic environments, historical geochemistry and historical mapping. Importantly, they have seen little to no exploration focused on lithium even documented lithium showings exists.

South East Labrador, Labrador: Brunswick has staked 55 licenses with a total surface area of 7,051 ha, located near and in between the areas of Cartwright, Port Hope Simpson and the intersection of highway 510 and 516, in SE Labrador. Labrador has a very strong mining history and currently hosts large scale mining operations in the Wabush (Fe), Schefferville (Fe) and Voisey's Bay (Ni-Cu) areas. Numerous pegmatite occurrences contain beryl and/or tourmaline among other indicator minerals, highlighting the potential for evolved LCT pegmatites and lithium mineralization. To date, the licenses cover 19 pegmatites measuring between roughly 500 and 2,000 m in strike length.

Mr. Killian Charles, President and CEO stated: "*Over the last 24 months, we have built one of the strongest lithium grassroot exploration strategies globally. Concurrent to our plans to rapidly advance the Mirage project in Quebec, where we excitedly await to release our first results next month from the winter campaign, we will continue to leverage our unique expertise and acquire domestic and global opportunities that combine sound fundamentals with high-quality targets. Our cost-effective grassroot strategy provides our shareholders maximum exposure to this generational lithium exploration boom and we are delighted to kick-start these initiatives in Q3 2024, with the goal of making significant discoveries to feed both North American and European markets.”*".

Montreal-based Brunswick Exploration has astutely established since 2022 an important portfolio of grassroots exploration projects (>790,000ha) in eastern and central Canada for metals necessary to decarbonization and energy transition with a particular focus on lithium.
