Brunswick Exploration Inc. (BRW-V) Midland Exploration Inc. (MD-V)

Brunswick and Midland, in partnership, announce the launch of a maiden drilling program on Elrond, James Bay, Québec.

On February 21, 2024, Midland, in partnership with Brunswick, announced the construction of a winter road on the Elrond Project for a maiden drilling campaign, to commence in early March 2023. The Elrond Project is located in the Eeyou Istchee-James Bay region of NW Québec. It is composed of 136 claims and is roughly located 12 km east of the Billy Diamond Highway and about 91 km SSE of the town of Radisson. The Elrond project is currently wholly owned by Midland but is subject to an option agreement signed with Brunswick in November 2022 (see : https://www.linkedin.com/posts/eric-lemieux-9468715_quebec-jamesbay-lithium-activity-6996574576524546048-9-gZ/?utm_source=share&utm_medium=member_desktop). Recall on October 3, 2023. Midland and Brunswick announced that exploration work has uncovered a new, undocumented spodumene-bearing pegmatite at the Elrond Project. Notably, the Arwen lithium showing and the Elrond property have never been drilled.

The maiden drilling program, aiming the Arwen lithium showing, to commence: The 2023 prospecting program successfully discovered the new spodumene-pegmatite Arwen Showing. The Arwen Showing is exposed over an area of ~250 m by 100 m and is, potentially, shallowly dipping to the north. The Arwen Showing includes a 75-

by-15-m zone visually containing up to 30% spodumene, where 3 selected grab samples collected by Brunswick returned between 1 and 3% Li₂O. A new high-resolution airborne magnetic survey, completed in fall 2023, suggests a favourable structural corridor at the Arwen Showing that could be about 4 km long by 0.5 km wide.

The drilling program shall be ground supported via a winter trail due to its proximity to existing infrastructure, such as the Billy Diamond Highway at about 12 km, and shall aim to investigate the lateral and depth extensions of the Arwen Showing.

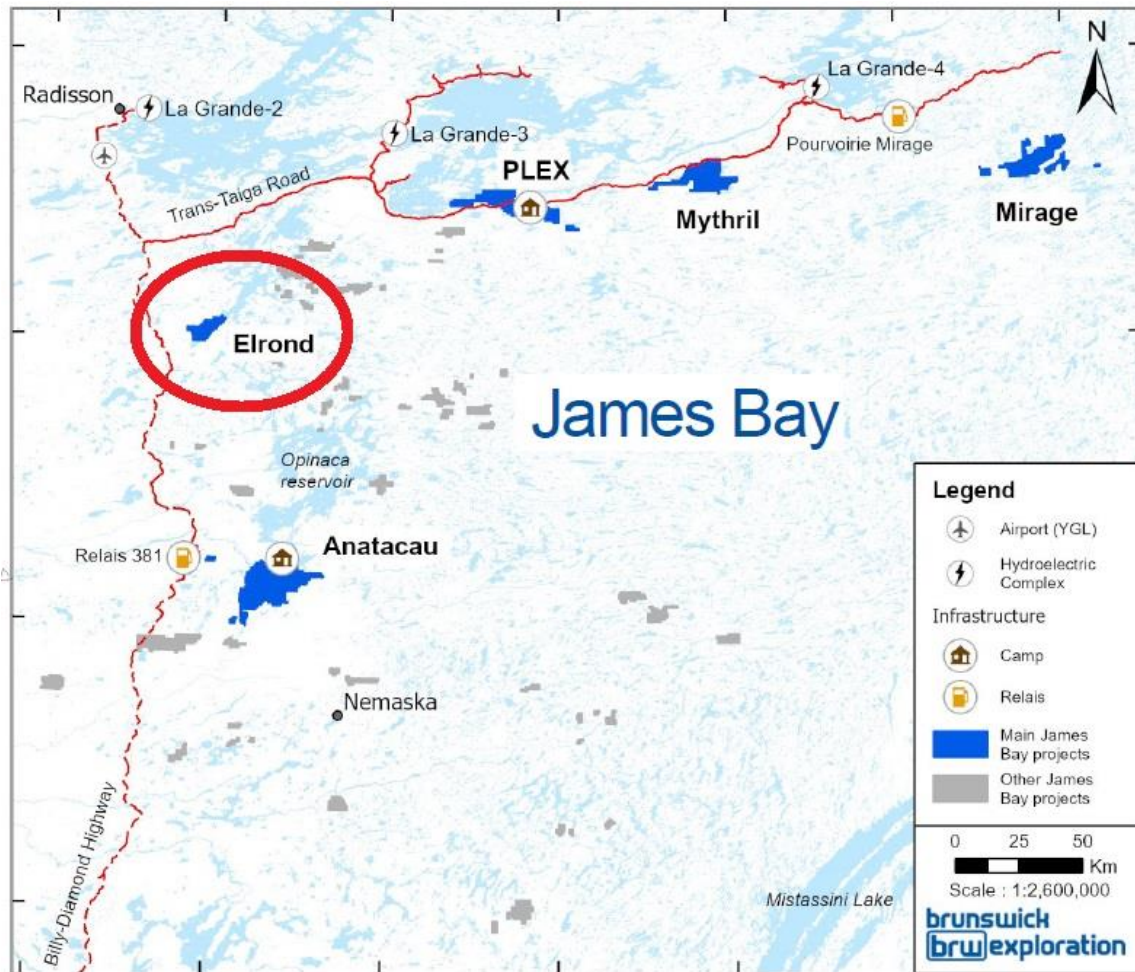

The Elrond Project is part of the Mythrill Option agreement with Midland, whereby Brunswick can earn a maximum of 85% interest in the projects. Midland also holds 100% interest in the Elrond Extension property (totalling 61 claims) located west of the Elrond project and to the south of Harfang Exploration (HAR-V) Serpent-Radisson Project (see: <https://www.linkedin.com/pulse/harfang-exploration-inc-har-v-discovers-spodumene-lithium-lemieux/>).

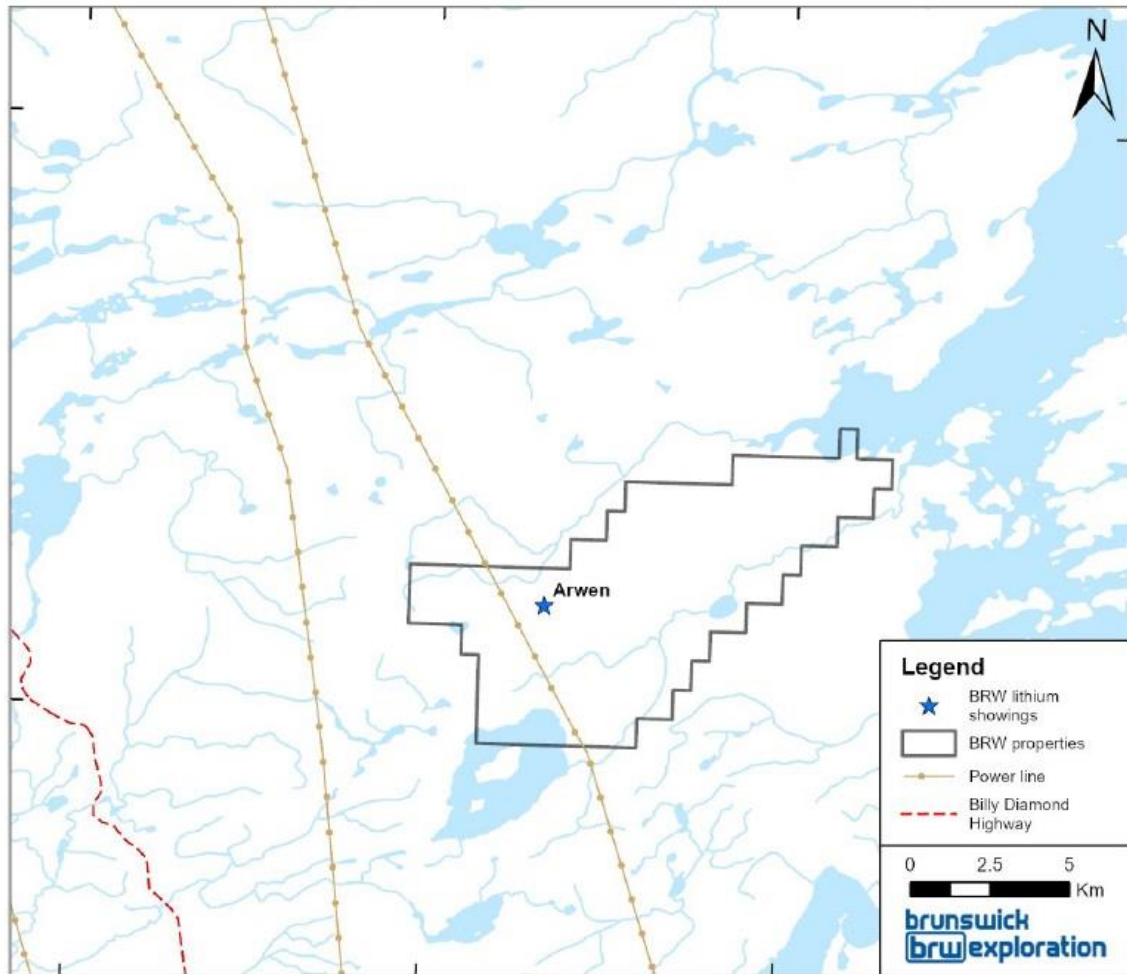

Mr. Killian Charles, President and CEO of Brunswick, stated: *“In 2023, BRW made three significant grassroots discoveries including Mirage (where a winter campaign is currently underway), Arwen and Anatacau Main. With the start of another drilling campaign, BRW is aggressively advancing its portfolio and building upon its recent discoveries. I am particularly excited by the size of the Arwen showing and this new drill program will test the extension of the discovery at depth and along-strike with the goal to prove the potential of the Elrond project”.*
