Midland Exploration Inc. (MD-V)

Midland and Wallbridge commence new drilling program on the Casault Property, Detour Trend, Québec.

Midland in partnership with Wallbridge Mining Company Ltd (WM-T) reported the commencement of a diamond drilling campaign in the eastern part of the Casault Gold Property on September 24, 2024. The Casault Gold Property, which comprises the Casault West and Casault East mineral claim blocks, is located ~110 km west of the town of Matagami, between Wallbridge's 100% owned Martiniere and Detour East gold properties. Wallbridge has an option to acquire up to a 65% interest in the 17,700ha Casault Gold Property from Midland Exploration (see https://www.linkedin.com/pulse/midland-exploration-inc-md-v-optioning-casault-project-eric-lemieux/). Casault covers more than 20 km of the Sunday Lake Deformation Zone, along which the Martiniere and Fenelon Gold deposits held by Wallbridge are located and which also hosts the world-class Detour Lake mine held by Agnico Eagle Mines Limited. Recall on March 22. 2022, Midland and Wallbridge had announced the commencement of a new ~1,100m drilling campaign following up on the gold discovery made in 2021 in the north part of the Casault following successful completion of an ~5,300m exploration drill program. The drill program had tested various grassroots exploration targets west of Wallbridge's Martinière Gold Project and flagship Fenelon Gold Property.

Drilling program underway: A new drilling campaign totaling of 5 holes for 1,100m was launched in September. The drill holes shall focus on a new prospective, yet unexplored area located north, "up-ice" from the gold-in-till anomaly (112 gold grains found in till, including 97 pristine grains 97) detected in hole CSS-23-018 during the overburden drilling program conducted in 2023. This target corresponds to a magnetic low (possible alteration zones) that extends along a NW-trending subsidiary fault extending from the north break along the main Sunday Lake Deformation Zone along the Detour Trend. This important structure is a first order metallotect to which are associated the Detour Lake gold mine in Ontario and the Fenelon Gold and Martiniere gold deposits in Québec. The new high-priority target is favorably located, ~ 18km west of the Fenelon Gold deposit held by Wallbridge.

Regional and structural mapping conducted in the summer of 2024: Regional-scale geological and structural mapping were conducted in summer 2024 in the Casault West and Casault East sectors, in order to assess regional structures and potential mineralization a) adjacent to the Martiniere property, b) adjacent to the Turgeon Pluton, and c) in the sedimentary basin on Casault East. Over 15 new exploration targets have been generated, including a new structural interpretation at Vortex and hence potential new drilling targets.
