Puma Exploration Inc. (PUMA-V)

Puma launches drone high-resolution magnetic survey at Williams Brook

Puma on April 25, 2024, reported that it has launched a high-resolution magnetic survey at its 100%-owned Williams Brook property in Northern New Brunswick. Recall on April 18, 2024, Puma reported that had confirmed and extended the mineralized corridor at its 100%-owned Williams Brook Gold Project following its scout drilling program. The drone survey shall be flown over 6 km of the Lynx Gold Trend and a width of 2 km. This is in the general area where the recent drilling confirmed the presence of a favourable prospective gold corridor (see: https://www.linkedin.com/posts/eric-lemieux-9468715_newbrunswick-lynx-tiger-activity-7186822232298434561-8l4i?utm_source=share&utm_medium=member_desktop).

Detailed Mag survey: Vision 4k Inc. (https://www.vision4k.ca/magnetic-surveys) has been contracted to fly a 372-line-km survey at 35- spacing, covering an area of about 1,200ha. The survey shall help map the lithology and structural features that control gold mineralization at the Lynx Gold Zone and translate that data to its extension along the Lynx Gold Trend. The detailed overprint of lithological contacts and additional structural features along the Lynx Gold Trend may identify additional exploration and drilling targets.

Marcel Robillard, President and CEO of Puma stated: "*Our 2024 exploration strategy is to focus on the Lynx Gold Trend. Our work at the Lynx Gold Zone has shown that high-grade gold occurs at the contact between two rock types. The survey will help us identify this contact along the newly identified extension of the Lynx Gold Trend, where very little work has been done so far but where our percent drilling has shown promise. This very low-cost exploration tool will help direct our summer trenching and stripping program in preparation for our next round of drilling*".
